## Service Descriptions

### Forest Stewardship Planning

Forest Stewardship Planning helps you manage your forest resource according to your objectives. The Forest Stewardship Plan will take into account forest health, wildlife including endangered and threatened species, water quality, soil protection, invasive species control, forest products, aesthetics and recreation.

These plans fulfill the requirements for Farmland Assessment in New Jersey. Cost share funding is available for all Forest Stewardship Plans developed within the Highlands Region of New Jersey and New York. In New Jersey this cost share can be counted towards income requirements for Farmland Assessment.

### Farmland Assessment

Landowners who own greater than 5 acres of forest land and complete and carry out the recommendations laid out in a State approved forest management plan are eligible to receive the Farmland Assessed tax rate on their forest land. To qualify the landowner must prove annual income and complete yearly paperwork which would be signed by a State Approved Forester.

### Community Forestry Planning

Community Forestry Planning works with Municipalities to manage their "urban" or neighborhood forest. These forest provide critical tasks including reduced storm water flows, cooling affects, clean air and improve quality of life and property values in towns that have extensive, well managed Community Forests.

## Service Area

Entire State of New Jersey and Southern New York State

## Qualifications

Certified Forester # 1554
